SmartStream Launches Reconciliations Service

TLM SmartRecs OnDemand gives users control

Darryl Twigg, executive vice president, product management, SmartStream

Transaction lifecycle specialist responds to hedge funds' interests

SmartStream Technologies, the transaction lifecycle specialist, has launched TLM SmartRecs OnDemand, a hosted service for simple reconciliations.

Users can control their own reconciliations, managing data in Excel and delimited formats, and identifying matching and exceptions.

"We've been in discussion with many smaller firms, such as hedge funds and financial departments within corporations, and they have repeatedly asked for a way to use our TLM SmartRecs OnDemand solution without having to provide their own internal support," says Darryl Twigg, executive vice president, product management, SmartStream.
