Can a reconciliations solution ever be truly instant?

Yes, it can. Welcome to SmartStream Air, an AI-enabled, standalone application that allows you to carry out reconciliations in an instant.

So, how can SmartStream Air help you?

Let's say your broker sends you a file containing transaction details. You want to see how it stacks up against information you have, but both sets of data are complex and, even worse, they are in different formats. Usually, tackling this sort of stuff takes time and means getting the IT department involved, but with SmartStream Air the hassle is completely taken out of the process. You simply log in with your user name and password, and then upload the two files you want to compare. SmartStream Air, which is driven by machine learning technology, reads the files, understands their correlation, and carries out the matching. Within seconds, it shows you any disputes - allowing you to investigate these discrepancies straightaway. Simple.

How come it works so fast?

SmartStream Air represents the next evolution of reconciliations technology. It combines SmartStream's expertise, gained over many years of experience, and the latest developments in machine learning and AI technology. Lightning quick, SmartStream Air uses AI algorithms to auto-configure reconciliations. These algorithms are so smart they can reconcile any data structure – unlike other solutions on the market, which can only understand certain domains. Thanks to the super speedy technology underpinning SmartStream Air, you can instantly see where exceptions are, releasing you from a lengthy, iterative process of trying to work out where the data mismatches lie.

So why can't we just stick to our old system or spreadsheets?

You can, but we believe there's a quicker way of doing things. Traditional reconciliations solutions are great for doing the really knotty stuff but configuring them takes time and generally entails IT support. If you're

using spreadsheets to compare lists of data, it can be time-consuming and error-prone. SmartStream Air is a revolutionary approach that does away with the lengthy configuration times of the past, allowing business users to reconcile complex sets of data in moments, whenever they need. This eliminates a great deal of time and effort, as well as making business users far less reliant on support from teams of operations and IT staff, which also helps keep costs down.

But I'll need training, right?

No, you won't need any training as SmartStream Air has a simple user interface with drag and drop capabilities.

I'd like to get started, will the solution take time a long time to install?

No, none at all. There is no installation and no onboarding needed, so you can be up and running very quickly. SmartStream Air is also secure, globally available, and multilingual.

What's it like?

SmartStream Air is like having a highly skilled, virtual operations team on hand that you can tap into at will. It is the only truly instant reconciliations solution currently available: producing accurate results within seconds, it empowers business users to look after their own reconciliations needs, as well as freeing up busy IT departments and operations people to focus on other, more strategic tasks. Importantly, as SmartStream Air is underpinned by sophisticated machine learning technology, it is continually improving, meaning that results only get better as time goes by.

Reconciliations have met their match, you could say.

How do I get started?

Simply use our enquiry form online:
smartstream-stp.com/contact

One of our consultant will be in touch to discuss your needs.

*Matching times may vary due to bandwidth, download speed and file size.

About SmartStream

SmartStream is a recognised leader in financial transaction management solutions that enables firms to improve operational control, reduce costs, build new revenue streams, mitigate risk and comply accurately with regulation.

By helping its customers through their transformative digital strategies, SmartStream provides a range of solutions for the transaction lifecycle with AI and machine learning technologies embedded – which can be deployed in the cloud or as managed services.

As a result, more than 2,000 clients – including 70 of the world's top 100 banks, rely on SmartStream Transaction Lifecycle Management (TLM[®]) solutions to deliver greater efficiency to their operations.
